

1-9**Study Guide and Intervention****Algebra: Area Formulas**

The **area** of a figure is the number of square units needed to cover a surface. You can use a formula to find the area of a rectangle. The formula for finding the area of a rectangle is $A = \ell \times w$. In this formula, A represents area, ℓ represents the length of the rectangle, and w represents the width of the rectangle.

Example 1 Find the area of a rectangle with length 8 feet and width 7 feet.

$$A = \ell \times w$$

Area of a rectangle

$$A = 8 \times 7$$

Replace ℓ with 8 and w with 7.

$$A = 56$$

The area is 56 square feet.

Example 2 Find the area of a square with side length 5 inches.

$$A = s^2$$

Area of a square

$$A = 5^2$$

Replace s with 5.

$$A = 25$$

The area is 25 square inches.

**Exercises**

Find the area of each figure.

5. What is the area of a rectangle with a length of 10 meters and a width of 7 meters?

6. What is the area of a square with a side length of 15 inches?
